share!**

## NEWS RELEASE

**High Intensity Moose Collision Warning Signs Stolen:** Prince George, B.C. (July 2, 2009) - The Wildlife Collision Prevention Program reports that two high intensity LED moose collision warning signs located east of Prince George, BC on Highway 16, were stolen in early April. The signs marked a high risk location for moose collisions which is associated with a mineral lick that is located in the highway right-of-way on the north side of Highway 16.

Drivers are urged to exercise caution driving in the area, located near the moose viewing site by the base of the Tabor Mountain ski hill, particularly during the month of July. There is a traditional peak of moose activity in July on Prince George area highways. "Moose graze mineral soils during late June and July because of nutritional demands caused by calving, nursing and antler growth," says Roy Rea, moose biologist, University of Northern British Columbia. "They seek out mineral or muck licks that are often located in highway right-of-way."

These two signs were part of a moose collision prevention initiative being implemented in north central British Columbia. The signs were funded by ICBC's Loss Prevention Program and were worth approximately \$4,000.00. "It will be difficult to find the funding to replace these signs," says Barb Waters, Regional Manager, BC Conservation Foundation.

The signs, which displayed the traditional black and yellow moose silhouette, outlined by bright, high intensity flashing LED lights, were extremely visible during both day and night. The signs were put in place in December 2007, and since then only one wildlife collision has been recorded in that location. From 2003 until the sign was installed in December 2007, seven animals had been killed in that location.

If anyone has any information regarding the theft of these signs, please contact the Prince George RCMP or Crime Stoppers at 1-800-222-TIPS.

**WCPP** "hints for the Highway" while driving this summer are:

- Slow Down and Obey all Posted Signs - collision avoidance and driver response time are improved at lower speeds.
- Drive Defensively - actively watch for wildlife in the ditch, on the road shoulder, and in the right of way, particularly between dusk and dawn.
- Be Alert - animals are unpredictable, often travel in groups, and may bolt unexpectedly.

- Use Your Vehicle - clean your headlights, use your high beams when safe, and wear your seatbelt.

For more information, please contact: Gayle Hesse, Coordinator, Wildlife Collision Prevention Program, British Columbia Conservation Foundation, Ph: 250-962-1001, Email: [wcpp@bccf.com](mailto:wcpp@bccf.com)
